PROJECTS

Web Vulnerability Scanner — Python

Python, Requests, BeautifulSoup4, Regex

- Developed an automated scanner capable of detecting missing security headers, open directories, reflected XSS, and basic SQLi patterns.
- Implemented crawling, form extraction, and input fuzzing for deeper coverage.
- Strengthened understanding of HTTP mechanics and automated reconnaissance.

Vulnerable-by-Design Flask Application

Flask, MySQL, HTML, CSS

- Built an intentionally vulnerable web application for hands-on OWASP Top 10 learning.
- Included insecure login, SQL injection endpoints, reflected/stored XSS, weak file upload validation.
- Documented each vulnerability with exploitation steps and secure coding recommendations.

DragonFlix — Movie Streaming Platform UI

React.js | REST APIs | CSS

- Designed a responsive UI to load and display 100+ movies/series using public REST APIs.
- Implemented dynamic search & filtering for genres, trending titles, and top-rated lists.
- Optimized state management to reduce unnecessary re-renders.

Experience

- Completed 100+ labs covering recon, enumeration, exploitation, and privilege escalation on platforms such as TryHackMe, HackTheBox, HackerOne, and OverTheWire.
- Tools used: Nmap, Burp Suite, Hydra, Gobuster, SQLMap etc.
- Ranked in the Top 3% on TryHackMe.
